

HazCollect Rollout Phases

HazCollect will be introduced in phases by geographic area

- However, no registrant will be denied use of the system solely based on the user's geographic location

- Phase 1, April 30, 2009
 - All participants in NWS HazCollect testing continue access
 - KY, WI, HI, AK, FL (only State Watch Office initially), east WA & north ID
- Phase 2, May 26, 2009
 - GA, AL, TN, LA, MS, AR, MO, SC, NC, VA, WV, MD, DE, DC, rest of FL
- Phase 3, June 8
 - WA, OR, UT, CA, NV, AZ, NM, TX, OK, CO, KS, NE, IA, IL
- Phase 4, June 22
 - ND, SD, MN, MI, IN, OH, PA, NY, NJ, CT, RI, MA, NH, VT, ME
- Phase 5, July 1, 2009
 - WY, ID, MT, GU, PR, VI, American territories in Pacific

HazCollect

Until now, when a government authority at the state, regional, or local level needed to issue a public warning through the National Weather Service (NWS) dissemination system, the message had to be faxed or telephoned to the relevant Weather Forecast Office (WFO) for manual entry. This process could result in delays or transcription errors.

As HazCollect becomes operational nationally during May and June 2009, the process will become automated, thereby reducing errors and delays. For further information on the national roll out schedule, visit the [NWS HazCollect Web site](#).

A Non-weather Emergency Message (NWEM) is a specialized form of an OASIS Common Alerting Protocol (CAP) alert that is communicated to the HazCollect server via DM-OPEN. The DMIS Desktop Tools incorporates an NWEM authoring tool for the use of warning authorities, although the authoring tool is not available for use until the HazCollect authorization process is completed. Third party developers may also develop authoring tools utilizing DM-OPEN's NWEM Application Programming Interface (API).

HazCollect

Update: April 30, 2009

- HazCollect is operational effective April 30, 2009.
- May and June will be a phase-in period. Outreach and the required training and registration processes will be focused in the named areas. The states of Wisconsin, Kentucky, Alaska, Hawaii, Florida and portions of Idaho and eastern Washington will lead the HazCollect phase-in during May.
- Other states will be added starting May 26 with national availability by July 1; however, emergency managers from other areas will not be turned away because of their location.
- See the ["For Government"](#) information and registration steps below that requires two registrations:
 - First: Disaster Management Interoperability Services (DMIS) registration to obtain your Collaborative Operations Group (COG) identity.
 - Second: HazCollect registration to obtain approval to use HazCollect your area of responsibility.

See the [April 30, 2009, HazCollect Status Update](#) under Resources below for more complete information. [Previous update messages are also available.](#)

See the [April 30, 2009, HazCollect Status Update](#) under Resources below for more complete information. [Previous update messages are also available.](#)

HazCollect, the NWS's All-Hazards Emergency Message Collection System, is a comprehensive national solution for the centralized collection and efficient distribution of Non-Weather Emergency Messages (NWEMs). NWEMs created by government officials with public warning authority are distributed through the NWS dissemination infrastructure, NOAA Weather Radio All Hazards, other national systems, and to the nation's Emergency Alert System (EAS).

A Non-weather Emergency Message (NWEM) is a specialized form of an OASIS Common Alerting Protocol (CAP) alert that is communicated to the HazCollect server via FEMA's Disaster Management Open Platform for Emergency Networks (DM-OPEN) interoperability infrastructure. FEMA's Disaster Management Interoperability Service (DMIS) Desktop Tools incorporates an NWEM authoring tool for the use of warning authorities, although the authoring tool is not available for use until the HazCollect registration process is completed. Third party developers may also develop authoring tools utilizing DM-OPEN's NWEM Application Programming Interface (API).

Frequently Asked Questions

» [Home](#) » [Disaster Management](#) » HazCollect

For Government

- [Step 1: Is your organization eligible?](#)
- [Step 2: Has a DM COG been established for your organization?](#)
- [Step 3: Complete the training](#)
- [Step 4: Request Access to HazCollect from the National Weather Service](#)
- [Step 5: Configure your software application](#)
- [Step 6: Ensure appropriate individuals receive training](#)

The following steps represent the process that warning authorities will use to access the HazCollect system.

Step 1: Is your organization eligible?

State, regional, and local warning authority may be determined based upon government jurisdiction plans and statutory authorities. Related plans include:

- Emergency Alert System (EAS) Plan (State/Local Emergency Communications Committee)
- Amber Alert Plan (State Amber Alert Committee/Law Enforcement Agency)
- Emergency Operations Plan, Warning Annex (State/Local Emergency Management Agency)

Step 1: Is your organization eligible?

State, regional, and local warning authority may be determined based upon government jurisdiction plans and statutory authorities. Related plans include:

- Emergency Alert System (EAS) Plan (State/Local Emergency Communications Committee)
- Amber Alert Plan (State Amber Alert Committee/Law Enforcement Agency)
- Emergency Operations Plan, Warning Annex (State/Local Emergency Management Agency)

Typically, the authority for warning is assigned to the jurisdiction's chief operating officer, and delegated to subordinates. Your jurisdiction should have a clear, written policy as to who may exercise warning authority, to ensure that warning coverage is provided 24 hours a day, 7 days a week.

HazCollect Review Group (HRG)

Primary review considerations of HRG and WCMs

- DMIS COG registered?
- HazCollect Principles and NWEM Best Practices training?
 - COG Administrator
 - COG “post” or “publish” members
- Authorization to issue emergency alerts to the public
 - EAS operational plan or similar agreement authorize?
 - Must state EMA watch officer approve local messages?
- EAS plan current with event codes adopted by FCC in 2002?

Step 2: Has a DM COG been established for your organization?

Whether you plan to use the DMIS Tools HazCollect authoring tool, or another product provided by a third party developer, your warning organization must enroll for a Disaster Management (DM) Collaborative Operating Group (COG). If you have used DMIS Tools in the past, it is likely that a COG exists for your organization. However, if you have not used DMIS Tools before, you will need to apply. Go to the DMIS Tools section of this Web site, review the [Get DMIS Tools](#) section, and complete the linked registration form. If you do not need to download the DMIS Desktop Tools application, please annotate that fact in the remarks section of the form.

Get DMIS Tools

- [Step 1: Is your organization eligible?](#)
- [Step 2: Is there an existing COG you can join?](#)
- [Step 3: Does your system meet the requirements?](#)
- [Step 4: Register for a COG](#)
- [Step 5: Download and install DMIS Tools](#)
- [Step 6: Plan your COG and review available training materials](#)

Step 1: Is your organization eligible?

DMIS Tools are only provided to government organizations within the United States and Canada involved with emergency management and response, or to commercial organizations such as utility companies, ambulance services, etc., with an on-going working relationship with government emergency management/response.

Commercial organizations are encouraged to become a member of an existing government Collaborative Operating Group (COG), though they may request a new COG if a government

Step 3: Complete the training

Completion of training in [HazCollect Principles and Non-weather Emergency Messages Best Practices](#) is a pre-requisite for access to the HazCollect system.

[Back To Top](#)

Step 4: Request Access to HazCollect from the National Weather Service

Once you have completed Steps 1-3 above, you will be ready to apply for access to HazCollect. Please see the [National Weather Service HazCollect Application](#) .

HazCollect Principles and NWEM Best Practices

Before applying for HazCollect access, all prospective applicants must satisfactorily complete the training course **HazCollect Principles and Non-weather Emergency Messages Best Practices**. The course is comprised of five chapters including:

- HazCollect Overview
- NWEM Message Types
- NWEM Data Elements
- Warning Best Practices
- Implementing HazCollect

The training is self-paced and is estimated to take two to three hours to complete. A series of Job Aids is included to assist you with your HazCollect implementation. A brief final test is required to demonstrate proficiency.

The training is self-paced and is estimated to take two to three hours to complete. A series of Job Aids is included to assist you with your HazCollect implementation. A brief final test is required to demonstrate proficiency.

The training is provided in three formats - online, ZIP file for local installation, PDF file for printable version -- all hosted from the MetEd Learning Management System, operated by the Cooperative Program for Operational Meteorology, Education and Training (COMET ®) Program. The final test must be completed online, and instructions for accessing the test and reporting results are provided within the training.

The training is available @ <http://courses.comet.ucar.edu/course/view.php?id=26>

If you have previously registered with MetEd, you will be redirected to the MetEd home page for log in. If you have not previously registered, you may access the registration from the log in page. Please note that your browser must allow cookies in order to use the MetEd system. If you take the training online or via local installation, you will also need to disable any pop up blocker.

Topic outline

Welcome to the 'HazCollect Principles and Non-weather Emergency Message (NWEM) Best Practices' course. If you intend to apply to the National Weather Service for HazCollect access, this course must be successfully completed prior to HazCollect registration.

The online version of the course is accessed from the first link below. Please disable any pop up blocker and the course will open in a new browser window. You may take the course at your own pace, but the training does not automatically resume from where you left off. A left side navigation panel may be used to return to your next lesson.

An identical ZIP version of the course may be downloaded by clicking on the second link below. You must return to this site for the final test per the instructions included on the last page of the course. In the near future, we will also provide a printable PDF version. Please check back for availability.

Direct links to the Job Aids included with the course are provided below for easy access in the future for those who have completed the training.

Please note: The course content presumes that multiple, third party Non-weather Emergency Message authoring tools are available, and we expect that to be the case during the upcoming months. At the moment, the only known third party application on the market is one developed by Hormann America, who participated in the NWS HazCollect Mini-operational Test and Evaluation. (Neither FEMA nor NWS make any product endorsements; this information is provided as a service only.) In the meantime, the FEMA DM Program DMIS Tools are available at no charge to qualifying organizations, as explained in this course.

HazCollect Principles and Non-weather Emergency Message (NWEM) Best Practices

Welcome! The purpose of this course is to ensure that appropriate, complete, and accurate warnings and alerts are issued to the public through the HazCollect system by authorized warning officials. By mastering this training material, you will gain a general understanding of the HazCollect system, the underlying Common Alerting Protocol (CAP) elements, and either an introduction or refresher for warning best practices. Equally important, this course provides resources for your jurisdiction to plan, implement, and continually improve an effective warning program.

This training is designed for employees of state or local governments who intend to use the HazCollect system to issue public warnings on behalf of their jurisdiction or area of responsibility. The completion of this training is a pre-requisite for HazCollect authorization.

The training material is organized into five chapters. You may work at your own pace and stop or resume the training at any time; however, it is recommended that you complete the material in the sequence presented. Although self-assessment quizzes are optional throughout the course, you are encouraged to complete them to assist you in retaining the material.

We hope you find the content and resources provided to be valuable, and we appreciate your comments and feedback.

Step 5: Configure your software application

You will be notified via email when your application for HazCollect access has been approved. For DMIS Tools users, it will be at this point that the NWEM authoring tool becomes activated. For a list of other known suppliers of NWEM authoring software, see the HazCollect [Frequently Asked Questions](#).

Your system administrator will need to configure accounts and NWEM posting permissions per the jurisdiction's warning policy (see [Step 1](#)). In addition, if your authoring tool provides the capability, you should pre-populate hazard specific warning templates that comply with warning best practices and technical requirements

[Back To Top](#)

Step 6: Ensure appropriate individuals receive training

It will be the responsibility of the requesting jurisdiction to ensure that system operators receive the training required in Step 3 above, and how to use the NWEM authoring software. It is highly recommended that your jurisdiction collaborate with the appropriate NWS Weather Forecast Office's Warning Coordination Meteorologist (WCM) for implementation. (Consult the [NWS WCM Roster](#)  as needed.) It is also recommended that practice with HazCollect be routinely included in the jurisdiction's emergency response exercises.

Using DMIS Tools for HazCollect NWEMs

A two part training series has been developed for DMIS Desktop Tools, which concentrates on the essentials for deploying and using DMIS to author and transmit NWEMs.

- Part 1: [Introduction to DMIS and COG Administration, \(PPT, 1.8 MB\)](#)
- Part 2: [CAP Alerting and Non-weather Emergency Messages, \(PPT, 2.8 MB\)](#)

The next offering of this course online via Live Meeting is scheduled for **Tuesday, May 19, 3:00 PM EDT**, (Part 1) and **Tuesday, May 26, 3:00 PM EDT**, (Part 2). To request an invitation, please email DMIS@eyestreet.com.
